

James Ehrlich

James Ehrlich is Founder of ReGen Villages a Stanford University spin-off company realizing the future of living in regenerative and resilient communities, with critical life support of organic food, clean water, renewable energy and circular nutritional flows at the neighborhood scale.

James is also an Entrepreneur in Residence at the Stanford University School of Medicine Flourishing Project, Faculty at Singularity University, Senior Fellow at NASA Ames Research Center and (Obama) White House Appointee for Regenerative Infrastructure.

Ehrlich founded ReGen Villages as a Dutch (EU) impact-profit company in 2016, with its patented VillageOS™ operating system software to use artificial intelligence and machine learning to define, design and autonomously manage regenerative neighborhoods that promote healthy long-term outcomes for residents and wider communities. ReGen Villages are planned for global replication and scale in collaboration with established industrial partners, universities, governments and sovereign wealth and pension funds, enabling an optimistic post-COVID green transition.
