

Nathaniel Calhoun

Nathaniel Calhoun specializes in the intersection of exponential technologies, business strategy and pressing global issues. He combines insights from centers of executive decision making and innovation (like Silicon Valley) and the world's most challenging environments (like post-conflict countries or world regions destabilized by food insecurity).

Nathaniel consults with governments, development banks and international organizations to design and foster innovations (and policy) that change how marketplaces work. His emphasis on economic resilience and a desirable future of work make his content especially relevant in the times of covid-19.

Nathaniel helps guide Singularity University's approach to impact as a Co-Chair of its Global Grand Challenge Faculty. He has moderated and keynoted at events of up to 4,000 people on every continent but Antarctica—and streamed live, nationwide in more than a dozen countries. He co-founded Code Innovation in 2009, which owns and operates the largest digital platform for women's savings groups in the world. This work has been supported by UNICEF, the Gates Foundation, the British Government and a variety of private donors.

Nathaniel customizes keynotes, workshops and short programs for executive leaders. He also crafts messaging for the general public.
